Informed Consent Please read this consent document carefully before you decide to participate in this study. You must be 18 years of age or older to participate. Purpose of the research study: You have been invited to participate in a research study. The purpose of this study is to better understand how people think about fairness in the workplace. If you chose to participate, you will be asked to complete an online survey by carefully reading all survey materials and providing honest responses to the questions. Time required: About 15 minutes. Risks, Benefits, and Compensation: There are no known risks or benefits involved in this study. If you choose to participate in this study, you will earn \$0.50 for use on Amazon.com through the Mechanical Turk payment system. Confidentiality: No identifying information will be collected. Neither your name nor any other identifying information will be known to the researchers, or be connected in any way with your responses. The final part of this survey asks you to provide some general demographic information about yourself. This information is only used to describe your general characteristics, not to identify you as a person. Analysis of answers will be in aggregate form and individual answers will not be published. There is a minimal risk that security of any online data may be breached, but since (1) no identifying information will be collected, (2) the online host (Qualtrics survey software) has SAS 70 Certification and meets the rigorous privacy standards imposed on health care records by the Health Insurance Portability and Accountability Act (HIPAA; see <http://www.qualtrics.com/security-statement> for Qualtrics' data security statement), and (3) your data will be removed from the server soon after you complete the study, it is highly unlikely that a security breach of the online data will result in any adverse consequence for you. Voluntary participation: Your participation in this study is completely voluntary. You do not have to answer any questions that you do not wish to answer. You have the right to withdraw your consent at any time without penalty. Whom to contact if you have questions about the study: Ken Swan, PhD: Lecturer, Department of Psychology, University of Florida, ta.kenswan@gmail.com, phone (352) 273-2191 Whom to contact about your rights as a research participant in the study: IRB02 Office, Box 112250, University of Florida, Gainesville, FL 32611-2250; phone 392-0433. Agreement: By choosing to respond to the questions in this survey by clicking the "Next" button on the bottom of this page, I am agreeing to the following statement: I have read the procedure described above, I voluntarily agree to participate in the procedure, I have received a copy of this description, and I am at least 18 years of age. Consider a group of American children (born in the early 1980's) to parents in the BOTTOM 3rd of the income distribution, which represents the lowest rung of the "income ladder." In other words, children of "lower class" parents. By the time those children have grown up to be young adults, in their mid-20's, what percentage of them do you think ended up in each of the following income categories? In other words, what percentage of them do you think stayed in the bottom third of the income distribution (i.e., lower class), like their parents, and what percentage of them moved up to the middle third (i.e., middle class) or to the top third (i.e., upper class)? Please type your estimates for each category in the boxes below. Note: your estimates for the three categories should sum to exactly 100%.

- _____ Top third (i.e., upper class) (1)
- _____ Middle third (i.e., middle class) (2)
- _____ Bottom third (i.e., lower class) (3)

Suppose your friend just had a mammogram. The doctor knows from previous studies that, of 100 women like her, 10 have tumors and 90 do not. Of the 10 who do have tumors, the mammogram correctly finds 9 with tumors and incorrectly says that 1 does not have a tumor. Of the 90 women without tumors, the mammogram correctly finds 80 without tumors and incorrectly says that 10 have tumors. The table below summarizes this information. Imagine that your friend tests positive (as if she had a tumor), what is the likelihood that she actually has a tumor? Type your answer in the textbox below:

If it takes five machines 5 minutes to make five widgets, how long would it take 100 machines to make 100 widgets? Type your answer in the textbox below:

A bat and a ball cost \$1.10 in total. The bat costs \$1.00 more than the ball. How much does the ball cost? Type your answer in the textbox below:
